

Frog Sashimi

1. Dissect!

- Dissect it into various parts, pieces or components.
- Look beyond the obvious features. Dig little bit deeper.
- Invite the group to share different perspectives (shine different lights) on the various parts.

2. Inspect!

- Be hands on!
- What are the purposes of each of these parts?
- What value do they add?
- What if you were to leave them out?
- What do participants like and don't like?
- What's pretty / ugly?
- What is understood and what is not understood?

3. Unravel!

- What are the relationships and dependencies between the parts?
- What elements of the system, interaction, and environment affect the parts?
- What conditions may change that can impact the part?
- Do we detect any anomalies?
- What is still unknown about the parts?

4. Sashimi time!

- What's needed to turn it into something more desirable?
- What are the first next steps?
- What can we change right here, right now?
- What's needed to resolve the undesirable parts?
